Computational procedure O Numerical Examples

Introduction

Good Solutions

- To increase public space that can be used to create new parks and open spaces for both recreational and commercial purposes
- To create green barriers along fast roads
- To create green roofs

・ロト・日本・日本・日本・日本・日本

Costs

- To acquire new spaces
- To train personnel
- To convert land in green areas
- To manage pre-existent types of green areas

n cities

- *m* different types of green areas
- $x_{ij} \in \mathbb{R}_+$: space of green area of type j in city i
- $\underline{x}_{ii} \in \mathbb{R}_+$: the pre-existent space of green area of type j in city i

n cities

- *m* different types of green areas
- $x_{ij} \in \mathbb{R}_+$: space of green area of type j in city i
- $\underline{x}_{ij} \in \mathbb{R}_+$: the pre-existent space of green area of type j in city i

We assume that the optimal space of green area is not less than a quantity, l_i , imposed by law and, if in a country such a constraint does not exist, then the minimum quantity of green area imposed by law corresponds to the pre-existing one:

$$m_i := \max\left\{l_i, \sum_{j=1}^m \underline{x}_{ij}\right\}, \quad \forall i = 1, \dots, n$$

Variational Inequality Formulation

Assumptions

- Let all the involved functions be continuously differentiable and strictly convex with respect to all variables.
- Let *F* be a continuous function and the following coercivity condition be fulfilled:

$$\lim_{\|X\|\to\infty\atop{x\in\mathcal{K}}}\frac{\langle F(X),X\rangle}{\|x\|}=\infty$$

Patrizia DANIELE
University of Catania

Existence Results

Theorem (Existence)

Let us assume that all the Assumptions are satisfied. Then, there exists at least one solution to the variational inequality

Existence Results

Theorem (Existence)

Let us assume that all the Assumptions are satisfied. Then, there exists at least one solution to the variational inequality

Theorem (Strictly Monotonicity)

The function F defining the variational inequality is strictly monotone on \mathcal{K} , that is:

$$\langle (F(X^1)-F(X^2))^T,X^1-X^2
angle>0,\quad orall X^1,\;X^2\in\mathcal{K},\;X^1
eq X^2$$

Existence Results

Theorem (Existence)

Let us assume that all the Assumptions are satisfied. Then, there exists at least one solution to the variational inequality

Theorem (Strictly Monotonicity)

The function F defining the variational inequality is strictly monotone on \mathcal{K} , that is:

$$\langle (F(X^1)-F(X^2))^T,X^1-X^2
angle>0,\quad orall X^1,\;X^2\in\mathcal{K},\;X^1
eq X^2$$

Theorem (Uniqueness)

As F is strictly monotone in \mathcal{K} , then the variational inequality admits a unique solution

Computational procedure O Numerical Examples

Lagrange Theory

Aim

To find an alternative formulation of the variational inequality governing the minimization problem for the optimal green area model by means of the Lagrange multipliers associated with the constraints defining the feasible set ${\cal K}$

Computational procedure O

Lagrange Theory

Interpretation of some Lagrange Multipliers

• If both
$$\lambda_i^* = 0$$
 and $\vartheta_i^* = 0 \Longrightarrow$

$$\sum_{k=1}^{2} e_{ik} + e_{i3}(f_i^*) - \sum_{j=1}^{m} \alpha_j x_{ij}^* - \sum_{j=1}^{m} \alpha_j \underline{x}_{ij} < 0 \text{ and } g_i^* - \sum_{j=1}^{m} \gamma_j x_{ij}^* < 0$$

$$\sum_{\substack{j=1\\x_{ij}^*}}^{m} \left(c_{ij}^*(x_{ij}, f_i) + c_{ij}^t(x_{ij}) + c_{ij}^m(x_{ij}, g_i) \right) \text{ reaches its minimum value in } x_{ij}^*$$

• If
$$\varphi_i^* > 0 \Longrightarrow \sum_{j=1} x_{ij}^* + \sum_{j=1} \underline{x}_{ij} = u_i$$

The optimal green area added to the pre-existing one reaches the maximum percentage of city *i* to be allocated to green areas.

Computational procedure O

Lagrange Theory

Interpretation of some Lagrange Multipliers

• If
$$\psi_{ij}^* = 0 \Longrightarrow$$

$$\frac{\partial c_{ij}^a(x_{ij}^*, f_i^*)}{\partial x_{ij}} + \frac{\partial c_{ij}^t(x_{ij}^*)}{\partial x_{ij}} + \frac{\partial c_{ij}^m(x_{ij}^*, g_i^*)}{\partial x_{ij}} = -\varphi_i^* + \alpha_j \vartheta_i^* + \gamma_j \lambda_i^*$$
• If $\lambda_i^* = 0$ and $\vartheta_i^* = 0 \Longrightarrow g_i^* - \sum_{j=1}^m \gamma_j x_{ij}^* < 0$

$$\sum_{k=1}^2 e_{ik} + e_{i3}(f_i^*) - \sum_{j=1}^m \alpha_j x_{ij}^* - \sum_{j=1}^m \alpha_j \underline{x}_{ij} < 0$$

The total emissions cannot be completely absorbed by the green area of the city and therefore actions should be taken in this sense

Computational procedure

Computational procedure

Euler Method and Convergence

$$X^{\tau+1}=P_{\mathcal{K}}(X^{\tau}-a_{\tau}F(X^{\tau})):\sum_{\tau=0}^{\infty}a_{\tau}=\infty,\ a_{\tau}>0,\ a_{\tau}\rightarrow0,\ \text{as}\ \tau\rightarrow\infty$$

Computational procedure

Computational procedure

Euler Method and Convergence

$$X^{\tau+1} = P_{\mathcal{K}}(X^{\tau} - a_{\tau}F(X^{\tau})) : \sum_{\tau=0}^{\infty} a_{\tau} = \infty, \ a_{\tau} > 0, \ a_{\tau} \to 0, \ \text{as} \ \tau \to \infty$$

Description

- **Step 0: Initialization** $X^0 \in \mathcal{K}$, $\tau = 1$
- Step 1: Computation

 $X^{ au} \in \mathcal{K}$ solving the following variational inequality subproblem:

$$\langle X^{ au} + a_{ au}F(X^{ au-1}) - X^{ au-1}, X - X^{ au}
angle \geq 0, \quad \forall X \in \mathcal{K}$$

Step 2: Convergence

 $\epsilon > 0$ and check whether $|X^{\tau} - X^{\tau+1}| \le \epsilon$, then stop; otherwise, $\tau := \tau + 1$, and go to Step 1

Computational procedure O Numerical Examples

Numerical Examples

Type of green area		Capacity of a km ² to absorb CO ₂ : α_j
j = 1: Urban green area	High	$lpha_1=$ 545,000 kg/yr
j = 2: Natural green area	Medium	$lpha_2=$ 569,070 kg/yr

Table: Types of green areas considered in our model.

Numerical Examples

Conclusions

 Optimization model for the management of green areas, Lagrange theory, computational procedure, and concrete examples

Computational procedure

Conclusions

- Optimization model for the management of green areas, Lagrange theory, computational procedure, and concrete examples
- The model could be further extended and improved, by introducing also budget constraints to the local organizations or increasing the awareness of inhabitants and of the industries with respect to environment and life, requiring, for instance, that every year a part of their revenue has to be destined to the improvement and maintenance of green areas
